

How Energy Changes Form

Math/Science

(OP, DL, OB)

Class Description: How does water taken on the ship convert to power to make it run? Students will discover the scientific principles behind these activities on the battleship. Sea water was used for all the basic energy needs of the sailors – from heating and cooking, to propelling the ship through the ocean. Students will experience through virtual reality areas of the ship which are responsible for the processes necessary for the conversion of these resources.
